Experience

General Assembly – Web Developer (New York, NY)   NOV '14 – FEB '15

The Web Development Immersive program's aim is to develop core-programming skills through collaboration on a range of projects with material relevance.
- Created a Chat App using Web Sockets that can handle multiple clients, handle disconnections, and persist chat conversations. Used Github for version control.
- Created the RESTful routes in the web application for a retail store app using Sinatra, ActiveRecord, and Sqlite3.
- Created a virtual closet app that would give you a unique outfit based on all the items you have in your closet using HTML, CSS and Rails.
- The inaugural GA Labs Marathon Hackathon, I built the calendar application using open source API and designed the web application with Material Design.

DHCS – Business Analyst (Sacramento, CA)   MAR '13 – SEPT '13

- Gathered business requirements by driving user-group meetings and working with various global, cross-functional and virtual teams
- Tested and validated data in Short-Doyle Medi-Cal system.
- Created Test Case from collected requirements.
- Teamed up with both internal and external software development groups to provide functional requirements specifications in form of JAD session, use cases, business process flows, and prototypes and management reporting requirements.
- Created Business Requirement Document, Functional Requirement Specification Document, User Requirement Specification and Change Request Document for system application development.

Hypertension & Renal Group – Data Analyst (Livingston, NJ)   APR '11 – DEC '12

- Perform analysis on medical data, in accord with the objectives of the analysis. Conducted data entry on medical data.
- Assisted the organization in performing data compiling and analysis required to evaluate the given medical data. Performed statistical analysis on medical data.
- Assisted in transition from hard copy documents to soft copy documents.
- Conducted data integrity across digital and hard copy documents.
